## **Daniel Hyoryno Thenaka**

Bina Nusantara University  
5th Semester Computer Science Student

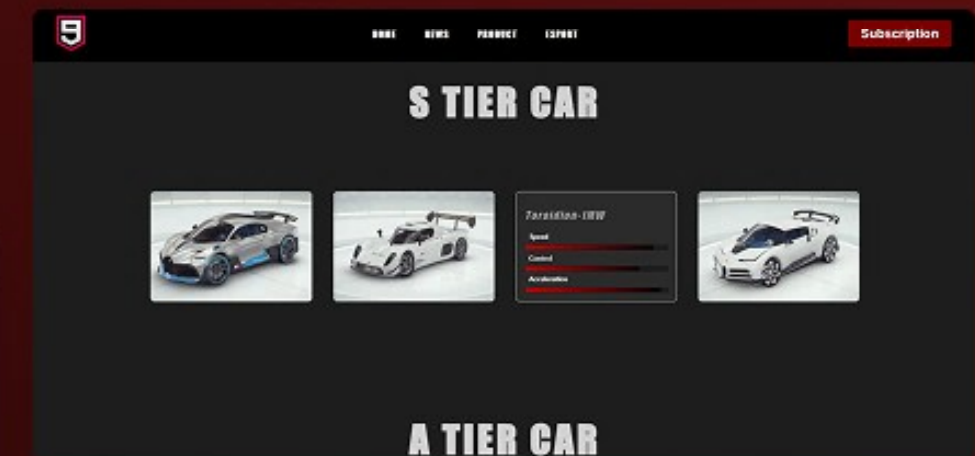

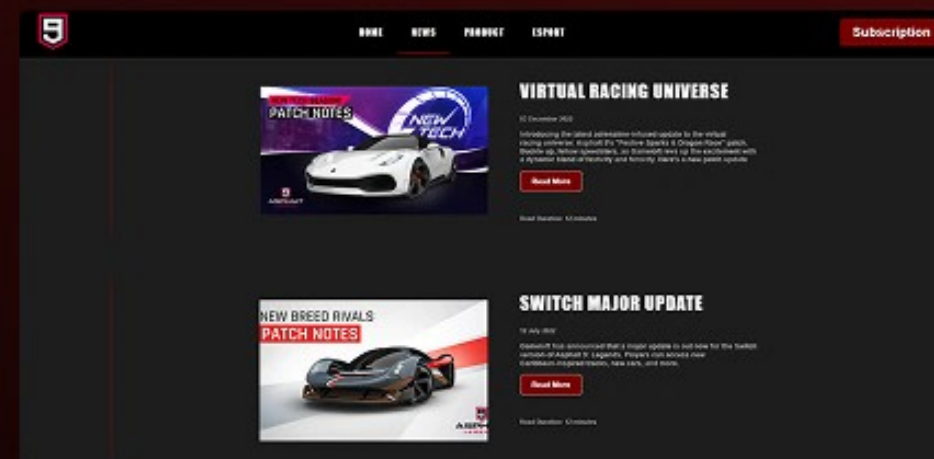

# Asphalt-9

This project was my first hands-on experience designing a website using HTML and CSS to create a static prototype for Asphalt-9, a fictional website designed to display comprehensive information about the Asphalt 9 racing game. The project aimed to help me build a strong foundation in front-end development by practicing web design, device responsiveness, and adding interactive JavaScript features.

2024

Front-End Developer

<https://github.com/DanielHyoryno/Asphalt-9>

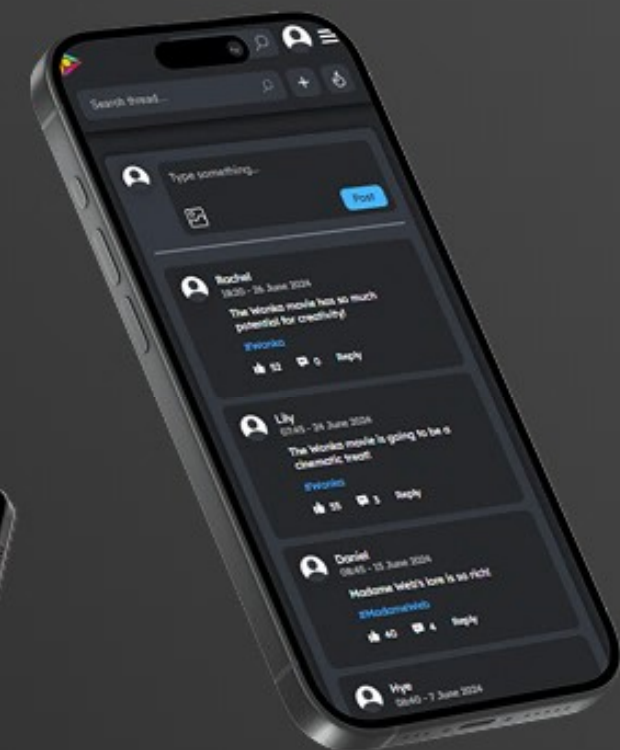

# MovieTime

Developed and Collaborated as a frontend developer on a static website prototype for MovieTime, a fictional streaming service with Twitter-like discussion threads where users can talk about movies they've watched. This group project improved my ability to build responsive, interactive layouts and work effectively in a team.

Enrichment 2026

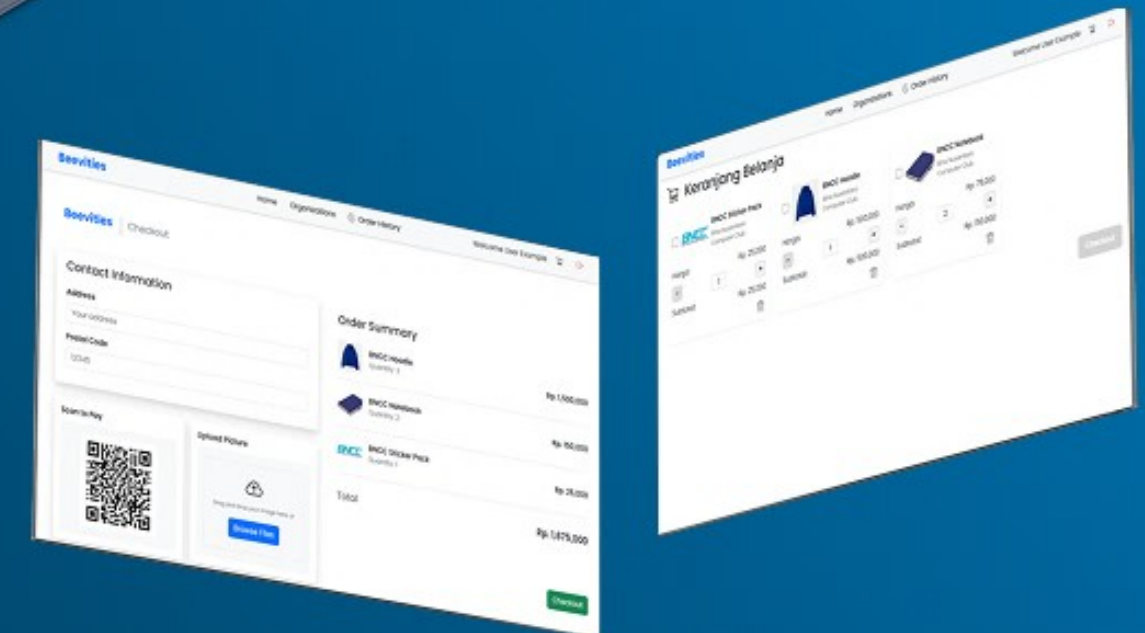

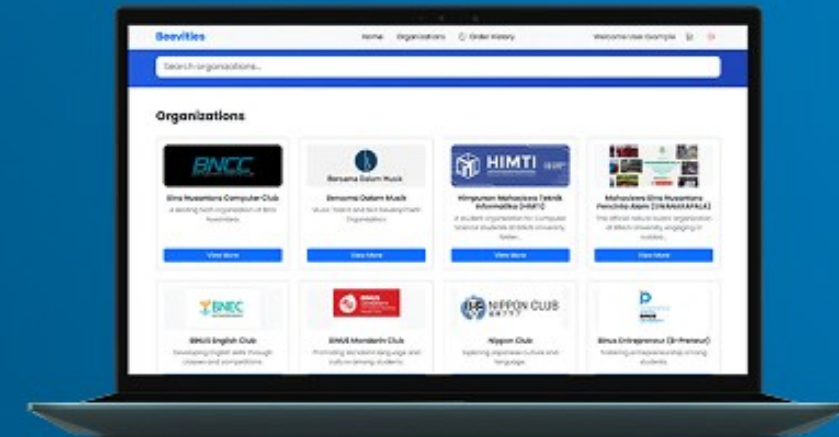

# Beevities

Developed a full-stack web platform with Laravel, React, and Tailwind CSS to centralize student organization activities like events, merchandise, and ticketing. As the lead developer in this group project for a Software Engineering assignment, I drove both frontend and backend development while learning to balance leadership with implementation.

2025

Full-Stack Developer

# AniMatch

Built a full-stack web app with React, Tailwind CSS, and Supabase to help anime fans discover shows through a swipe-based system inspired by dating apps. This self-initiated project taught me how to integrate engaging UI/UX design with backend services for a smooth user experience.

2025

Full-Stack Developer

# Wallawet

Built Wallawet, a personal finance web app with React, Tailwind (shadcn/ui), and Supabase that helps track spending, categorize transactions, and visualize trends. Designed and developed as a personal project to manage my own finances.

2025

Full-Stack Developer
